

OVERVIEW

Business Intelligence solutions enable organizations to quickly analyze data from multiple data sources and get to the “why” behind an event or action.

Conventional reporting systems and spreadsheets require managers to pore over numerous reports and expend precious time in order to view information. These systems are usually inflexible and cannot cope with the dynamic nature of modern-day business, making analytics a “post-mortem” exercise.

CUBOT™ has dynamic analytics which helps managers identify anomalies before they become problems and take corrective action quickly.

TECHNICAL SPECIFICATIONS

- Server Operating System: RedHat® ES 3.0 or higher, Suse Linux® 9.1 or higher, AIX®, Solaris®
- OS Dependencies: Perl with DB5® version 5, GD Graphics® Library, JVM® Version 1.4.2, UNIX® ODBC, ODBC driver for source data repository
- Client System: Internet 5.0 or higher, FireFox® 1.0 or higher, Mozilla® / Netscape® 7.0 or higher
- Database platforms: MySQL® 4.1 or higher, Oracle® 9i and 10g, IBM DB2® UDB
- Web Server: Apache® Web Server
- Data Source: Text files, spreadsheets, XML®, ODBC or JDBC compliant databases

CUBOT™ ANALYZER

- **Easy “check & click” approach.** CUBOT™ Analyzer is based on a simple click & check approach which makes using analytics as easy as browsing a website. Requires no programming or query writing.
- **Text or graphical views.** Choose from numerous graphical views or stick to classic tabular text view. Drilldowns possible from both text and graph views.
- **Deep insight.** If you see anomalies, drill all the way down to the lowest level to the actual transaction data, and not just up to low-level data aggregates.
- **No predefined hierarchy.** Allows for analysis across any logically connected dimension and does not enforce predefined hierarchies.
- **Preset and custom compute options.** Simply choose from a list of preset compute functions to perform a calculation or create a custom compute function.
- **Data portability.** Export reports to spreadsheets, copy them to PowerPoint™ presentations or print them.

ANALYZER BENEFITS

- **Easy problem identification and elimination.** Allows you to identify anomalies as they occur and before they become problems. Get to the “why” in minutes and take corrective action immediately.
- **Integrated view.** Analyze data from multiple departments such as HR, finance, sales, marketing and operations through one easy- to- use interface.
- **Save on time and effort.** Eliminates the effort of manually compiling data from disparate systems translating into huge savings in time and effort.
- **Powerful visual mining.** Powerful visual mining through numerous graphical views or classic text view.
